

# New Asset Hub Improvements

October 14, 2015

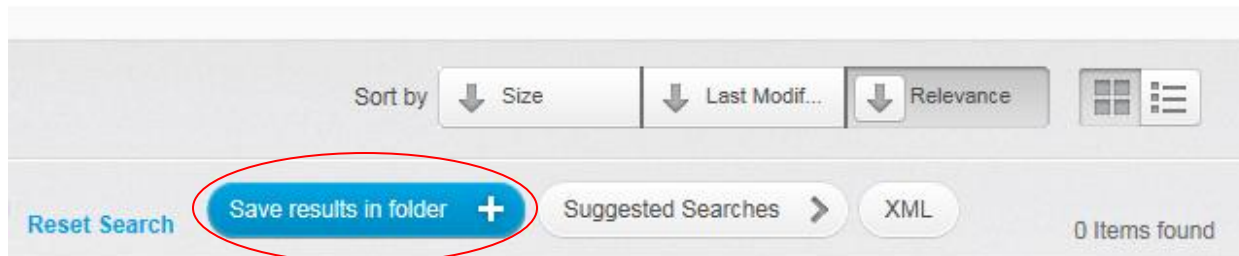

New HP Asset Hub improvements will be available starting October, 15.

Part of our continuous development to offer you a **faster, easier and more effective user experience** we are preparing the launch of **HP Asset Hub 4.2.** with the following improvements related to:

## HP Asset Hub 4.2. improvements

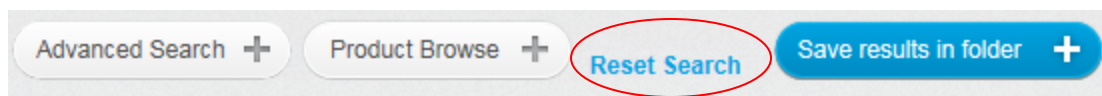

**Enhanced visibility to help managing folders:** folders in the top menu bar and save to folder are now highlighted to make them more apparent.

### Improved search options:

#### 1. Reset search - new button available

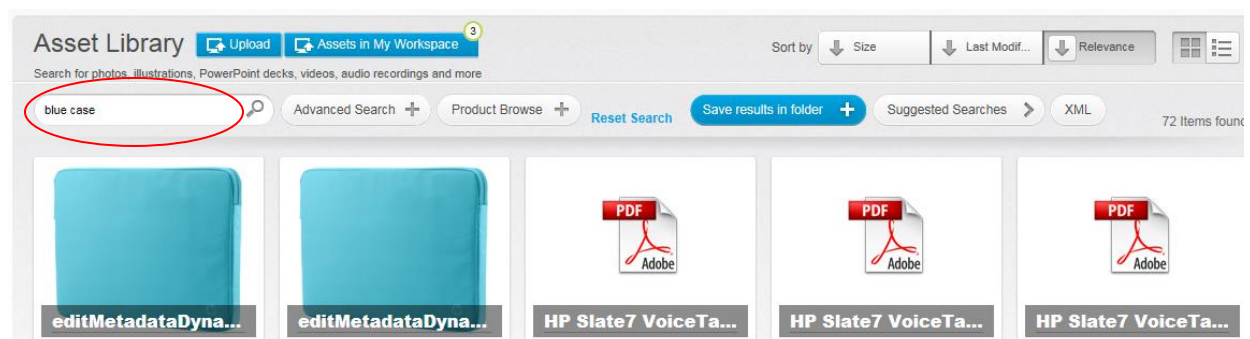

Instead of manually de-select your search criteria in advanced search/product browse, you can now simply click on the new button and start a new search.

#### 2. Simplified search logic in order to receive more relevant results

“AND” will be the default search logic in the search box in order to give you less and more accurate results.

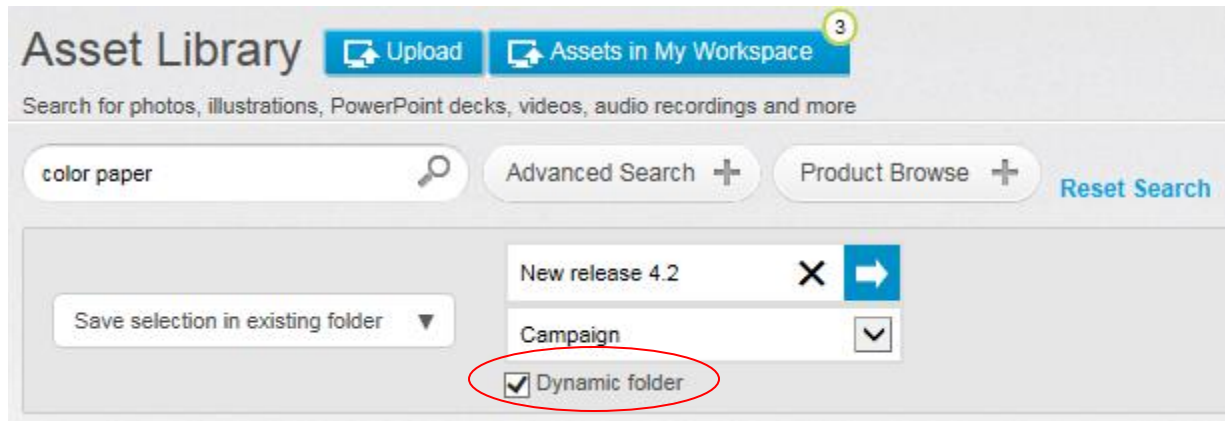

E.g. Prior to this improvement if you searched for “blue case” the search results would display all assets containing *blue* and all assets containing *case* (first the results from AND logic, then the results from OR logic). With the new improvement your results will only display assets that reflect the search key words which are related to both words together - “blue AND case”. (If you are interested, you can always do a separate search as “blue OR case”).

### 3. New dynamic folders

Make a search with or without filters and save it as a dynamic folder. Not only existing assets but also new assets uploaded afterwards that meet the search criteria will show up automatically in the dynamic folder.

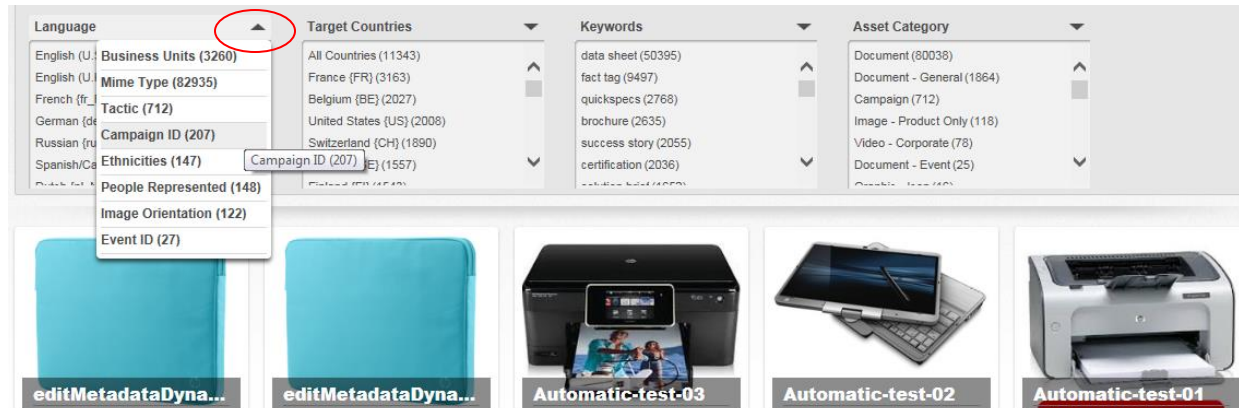

This option is not available for private and G-drive folders. You won't be able to manually add assets to a dynamic folder (contents are based only on selected query).

### 4. Selection of facets in advanced search

Until now, facets that Asset Hub displayed dynamically could not be changed by the user. To reduce the search time and improve findability you can now change the facets proposed by Asset Hub to those you want.

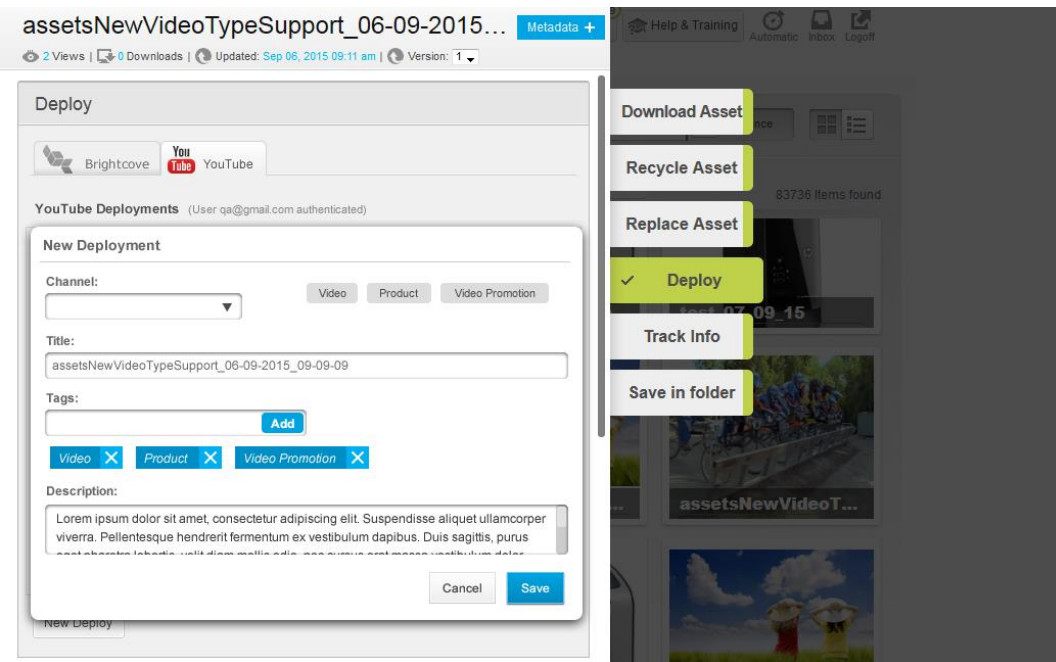

E.g. If you don't see the facet you need, simply click on any of the facets and chose the one you want to see.

## Video deployment

New tab to directly deploy videos to Youtube.

Available only to users with deploy video permissions. If you need to benefit from this feature you need to request access to it.

## Meta data model simplification

40% reduced number of metadata fields in asset upload forms (optional fields rarely used). This facilitates a faster upload process.
