

Simplified product asset search and new notification features

June 2, 2015

As we continue to deliver on your feedback, we have further improved your HP Asset Hub experience.

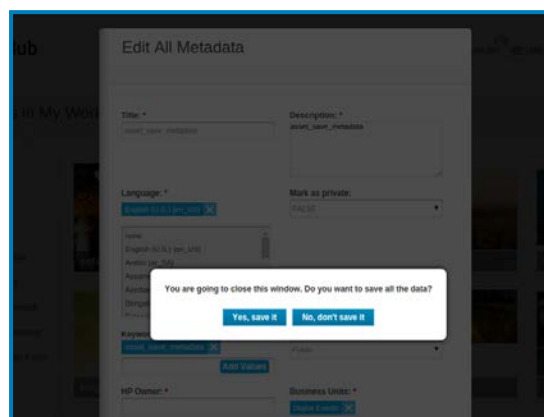

Simplified access to product asset search

HP Asset Hub now provides access to the *Product Browse* function from the top menu bar on the HP Asset Hub homepage.

No time to complete your asset update?

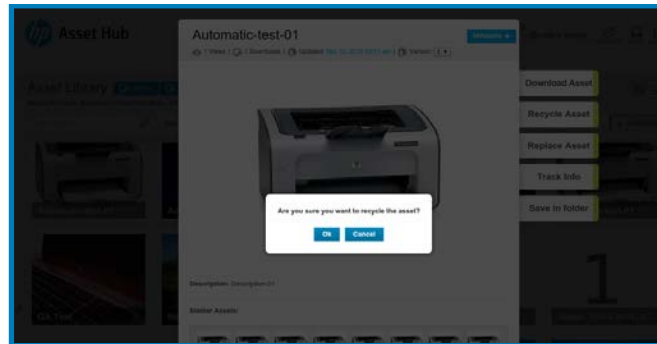

When uploading an asset, you can now save incomplete metadata in your workspace and finalize it at a later time. When you close the window or click the “Cancel” button, you now have the option to save your metadata.

In addition, **new notification features** are now available to indicate actions have been processed or to request confirmation before certain actions are executed.

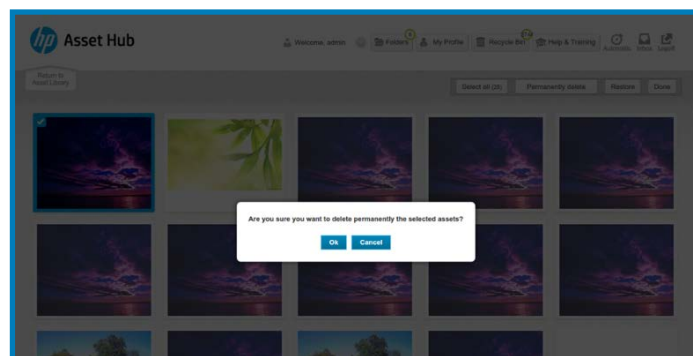

Alert to confirm *recycle asset* action

Before recycling an asset, you will be asked confirmation.

Alert to confirm *delete asset* action

Before deleting an asset, you will be asked confirmation.

Folder transfer notifications

When transferring an asset to a folder, you will be informed that your request is being processed and notified when your request has been completed.
