

HP Asset Hub Communication

To: All Asset Hub users

Improved usability and performance boost your efficiency

June 24, 2015

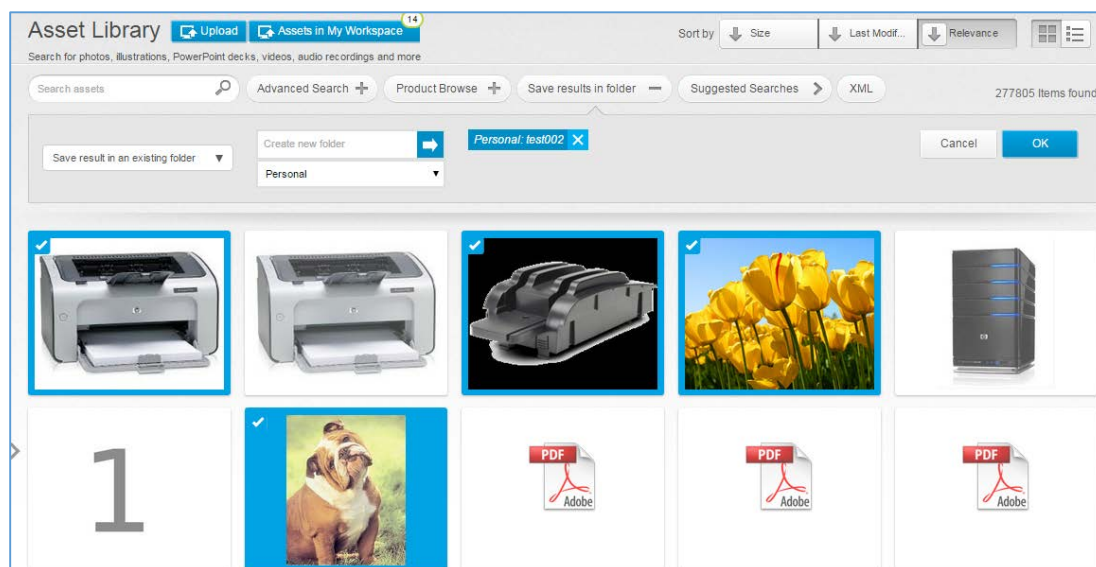

As we continue to deliver on your feedback, we have further improved HP Asset Hub's usability and performance to help you become more effective:

Enhanced performance

Nearly instant access to the Asset Hub folder area reduces the wait time to access the folder area from 50 to only 2 seconds.

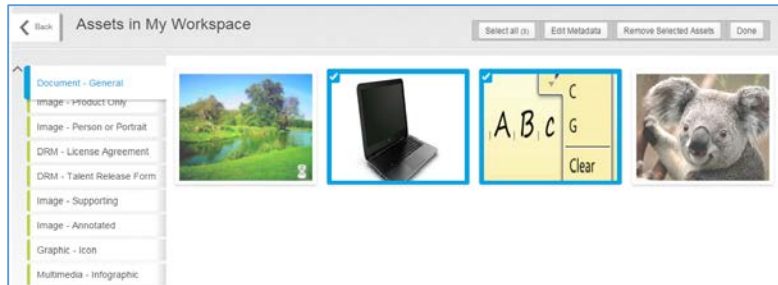

Simplified creation of asset collections

Select one or multiple assets from the search results and save them to a folder, enabling you to rapidly narrow down and create asset collections based on your search criteria.

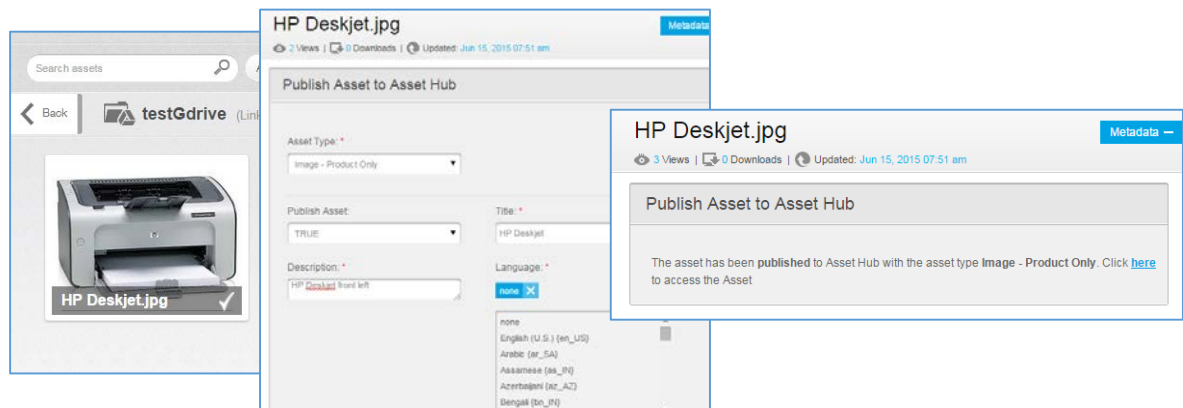

Improved asset upload

- In My Workspace, multi-selection of assets is now enabled for you to perform the same function across multiple assets at once, i.e. multi-editing common meta-data for assets of the same asset category.

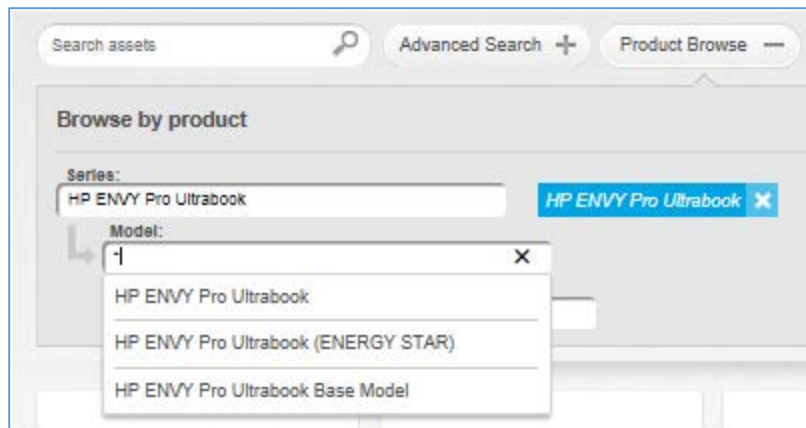

- If you are using GDrive integration with HP Asset Hub, you are now able to complete the metadata and publish the asset from the GDrive folders, eliminating the need to upload the assets to My Workspace in HP Asset Hub.

The forms will dynamically show up after the initial selection of the Asset Category and upon completion, assets will be submitted to the main HP Asset Hub library bypassing the Workspace. Once published, you will be presented with a link to the asset in the asset library.

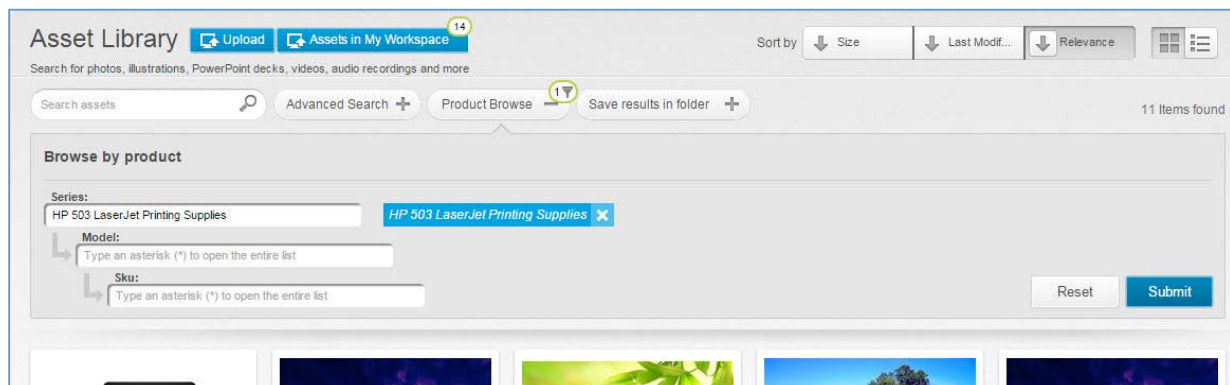

Improved product asset search

The **Product Browse** option now allows you to list all series, product models or/and SKUs from the hierarchy, by typing the placeholder * into the respective field. Simply select the relevant series, product model and/or SKU and run your search.

Further enhancing usability, you will be able to collapse the Product Browse filter without losing search results. A **filter icon** will now be visible on the main **Product Browse** menu if respective filters are applied to the search.

Additional usability enhancements include:

Ability to assign multiple owners to an asset

When uploading an asset, multiple owners can now be assigned in the **HP Owner** metadata field, providing you more flexibility to manage the asset effectively. Insert a comma separated list of valid email addresses.

Automated notification to asset owners

Indicated owners will receive automated notification emails when an asset reaches the release/obsolete/end of rights date, to be kept informed of key milestones, and to potentially take action.

Entire folder name displayed

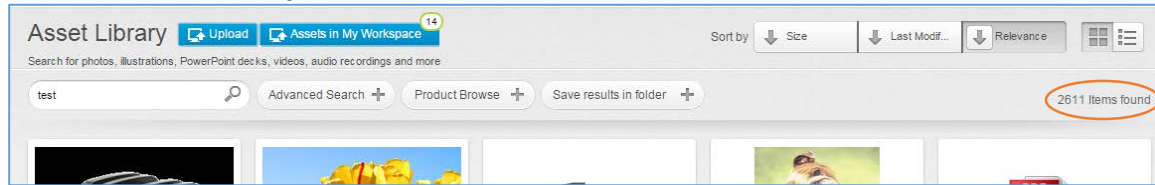

Hover over the folders to see the entire folder name displayed. This will avoid the folder name to be trimmed, when the number of characters is too long.

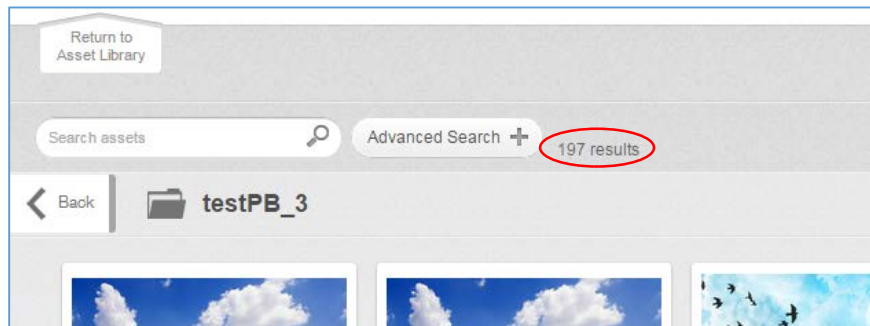

Total number of assets displayed

You will now be able to see the total number of assets displayed in the Asset Library, inside a folder, or as a result of search/filters.

Inside the Asset Library

Inside the Folder

Public asset in a private folder notification

In order to mitigate risk of content leaks, you will receive a warning if you intend to upload a public asset into a private folder ((when the private flag is set to FALSE), since the asset will be visible in the asset bank library for search and download.
